CLIMATE RESISTANT CORAL REEFS
2025 USC Research Team

We are partnering with Stanford Professor Steve Palumbi and USC Professor Sriram Dasu to **scale coral reef restoration in Indonesia** using an innovative, **cost-efficient technology** that tests coral heat resistance. Our project aims to expand the use of this methodology, quantify the economic value of restored reefs, engage local communities, and develop a **digital tool to identify optimal restoration sites**—creating a scalable, inclusive, and resilient model.

ANICA CAMACHO

3rd Year | Business Administration; Real Estate & Finance
Hometown: Guam
Previous experience: Guam Fish Age-Growth Analysis; Plant Pest Prevention Researcher; Alpha-Amylase Inhibition

MARINA PARKER

2nd Year | Business Administration; Law & Technology; Environmental Studies
Hometown: Bay Area, California
Past experience: social impact consulting, marketing strategy within hospitality, entrepreneurship, startup consulting

RILEY PIERCE

3rd Year | Business Administration, Business Analytics; Economics
Hometown: Redondo Beach, California
Past experience: dataset modelization, comparison, and description; domestic and international economics.

SRIRAM DASU, PhD

PhD Operations Management
USC Professor of Data Science; Business of Sustainability; Supply Chain Management; Machine Learning

STEPHEN PALUMBI, PhD

PhD Marine Ecology
Stanford Professor of Marine Sciences; Oceans and Biology; Expert on human-induced evolutionary change and genetic resistance
